

Pickleball Scoring

Useful scoring information to help keep track of the score

- When either team's score is even (0, 2, 4...), the correct position of their **“Original First Server”** is in the right/even/forehand court.
- When either team's score is odd (1, 3, 5...), the correct position of their **“Original First Server”** is in the left/odd/backhand court.

In a tournament or league, the **“Original First Server”** for both teams is given a **colored wristband** before the game begins. Thus, there is never any question over who is the **“Original First Server”** for both teams. If you do this for every game you play, you can quickly resolve position and/or score questions.
